DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-29 and 52-66, drawn to LC tunable resonator device, classified in class 331, subclass 17, 59.

II. Claims 30-51, drawn to an antenna using conductive composites, classified in class 343, subclass 873, 713, 700 MS.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination Group I does not require an antenna coupled to the capacitor and the inductor. The subcombination has separate utility such as a composite antenna in any electronic system containing wireless links that merely controls the electromagnetic energy created by the LC resonator circuit or the like.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
